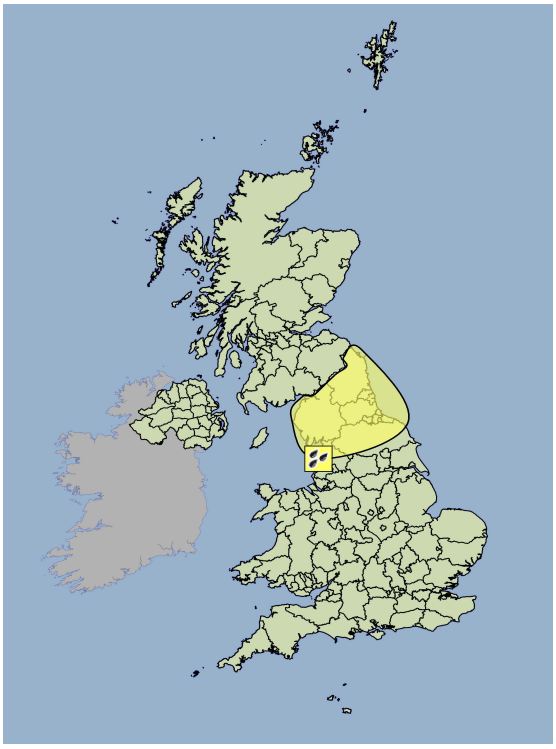
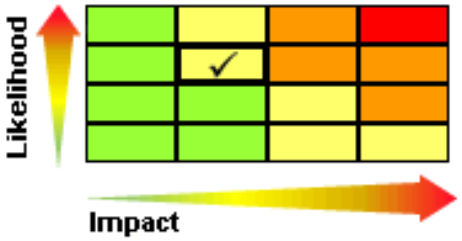
National Severe Weather Warning Service





Chief Forecasters Assessment
A low pressure system is expected to become slow-moving over the north of the UK on Sunday. This will bringing further outbreaks of rain and hill snow at first to parts of northern England, before the precipitation becomes more showery through the day.

Across and to the west of the Pennines, 10 to 20 mm of rain is expected widely, with around 30 mm on high ground. Above around 500 m it is expected to fall as snow. To the eastern side of the Pennines it is expected to be more sheltered and thus rainfall amounts should be much less, however all areas remain sensitive following the preceding days' rainfall.

As uncertainties remain in the details of this system, this warning will be updated in coming days.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:15 on Sun, 10th Jan 2016** until **23:45 on Sun, 10th Jan 2016**

Further spells of rain are expected at first on Sunday, clearing to showers through the day. With the ground remaining saturated, be aware of further impacts from surface water and river flooding.
